Sprinkler system design
Structural engineering

STATEMENT BY FIRM Amec Foster Wheeler team's experience is highly focused on the following: 1. Technical expertise in highly complex, multi-discipline projects. We have provided the State accurate information for the designs necessary for several project implementations. 2. Cost estimating and scheduling for projects that is complete and accurate. Our cost estimate record has provided over the last five years estimates that are within 5% of the bid costs for constructing our projects. As a result recently we provided Independent Government Cost Estimates and evaluation of contractor designs for projects at 50+ Federal Buildings throughout the United States. 3. Energy engineering assessing consumption and recommending savings measures. In the summer of 2014, Amec Foster Wheeler's design for a net-zero energy usage building in Farmington, ME, the Brookside Housing for the Elderly, completed construction. This building is designed through a combination of sustainable, highly insulated design and on-site energy generation to operate on minimal utility costs for the next 30 years. The benefit to our client is the savings in utility costs, estimated at \$55,000 per year, and these savings are directly passed on to the tenants, improving their quality of living. This project will be LEED Platinum certified, all units and the building itself will be Energy Star rated, and it will be a Green Building Community Gold certified. We are committed to meaningful design of energy saving and sustainable buildings. 4. Quality control at Amec Foster Wheeler is a mandated corporate policy. We have implemented a robust program that includes ongoing technical reviews for each submission by independent discipline peers, followed by an overall coordination review. Amec Foster Wheeler understands that the most effective way to assure success in our projects is through our commitment to delivering quality services and products to our clients.
